

Android Developer

Witworks is a modern-day consumer technology company that makes smart devices in the home and lifestyle space. We are a team of designers, developers & engineers who love molding atoms & pixels to create devices that have the ability to become ubiquitous, and solve everyday user problems. We also believe that every interaction with our devices in the material or the digital world must be intuitive and delightful.

For our first connected device, we are reimagining how we interact with a wrist wearable. Traditionally, time was the most important information we sought on the go, but this has long changed since smartphones came into being. We believe it is time to transform the wrist into a home for the most essential information we seek, but not by miniaturizing smart phones.

We have thus developed a new paradigm for defining the content and interactions on a wrist wearable and are building our own Wearable OS & Device to bring this to life. Our intent is to create an iconic device that will revolutionize the way the world looks at smartwatches and find a place on millions of wrists in the near future.

As the **Android Developer**, you will help our Wearable OS interact seamlessly with the Android ecosystem. You will build the Witworks Android App to compliment our Wearable OS in the best possible way, and extend this functionality to other Android Applications by designing the Android SDK for communicating with our Watch.

Key Responsibilities:

- Build the Witworks Android App that helps drive the core functionality of the watch: to be a latency free notification and feedback device for the phone
- Engage with the product design, software & firmware teams to specify, design, build and test new features
- Develop the Android SDK for developers to interact directly with the watch
- Leverage on knowledge of Android Development to help design & build the Wearable OS better
- Build development environments and tools, both for the internal engineering team as well as for developers using our SDKs
- Employ best in class practices to achieve a seamless user experience and robust/reliable implementation. Work with outside data sources and APIs

Requirements:

- Experience working in a professional software development team
- Experience working on a UI in collaboration with a design team
- Experience with git, Android Studio, Gradle and unit test frameworks
- Excellent knowledge of the Android SDK

Witworks Consumer Technologies Pvt. Ltd
#76 7th A Cross 4th B Block, Koramangala
Bangalore, Karnataka - 560034

- Experience working with software that integrates with a hardware peripheral (preferred)
- Experience with power optimization for network & wireless-heavy software (preferred)
- Experience working with Android's Bluetooth stack (preferred)
- Excellent communication skills
